

STATE OF SOUTH AUSTRALIA

VITAL STATISTICS, 1955 (PRELIMINARY)

The following preliminary particulars for 1955 are published subject to slight revision, with particulars for 1954 in parentheses.

Births Registered. - The number of births registered was 18,494 (18,227). The last 6 years have been successive records in numbers, increasing from 16,042 in 1949. The highest birth rate per 1,000 of population in recent years was 25.23 in 1947, and has now fallen to 22.55 (22.89).

Actual Births. A period of 42 days after birth is permitted for registration and the number of births registered in a year therefore differs from the number of births actually occurring during the year. The numbers of registered and actual births during recent years have been:- 1950 - 17,306 and 17,322; 1951 - 17,463 and 17,319, 1952 - 17,884 and 17,904, 1953 - 18,156 and 18,184, 1954 - 18,227 and 18,357. The number of actual births for 1955 is not yet available.

Sexes of Births. The number of boys compared with 100 girls born does not vary greatly and in recent years has been:- 1951 - 105.45, 1952 - 104.55, 1953 - 106.11, 1954 - 105.19 and 1955 - 106.20.

Adoptions. 403 (423) children were legally adopted during the year.

Legitimations numbered 28 (63).

Deaths Registered. 7,536 (7,179) an increase of 357 on the previous year and 352 more than the previous record total for 1951, the rate being 9.19 (9.01). The numbers dying from the various causes are not yet available for 1955 and hence comparisons cannot be made.

Infantile Mortality. Deaths of children under 1 year were 431 (388). The infantile death rate, or the number of deaths of children under 1 year per 1,000 births during the year of calculation was 23.30 (21.29). This rate is higher than that of the 3 previous years, but is still one of the lowest in the world and has shown a remarkable decrease. Eighty years ago it was 150, sixty years ago it was 100, thirty-five years ago it was 60 and thirty years ago it was more than double the present rate.

There were 109 (125) deaths of children under 1 day, 152 (152) of children from 1 day to 1 month, and 170 (111) of those from 1 month but under 1 year. Compared with earlier years there has been a distinct decrease in the death rate of children under 1 month but a far greater decrease in respect to children from 1 month and under 1 year, although there has been an increase in the latter group for 1955.

Deaths of infants from certain causes for 1955 (1954) have been:- Diarrhoea 24 (12), Congenital Malformations 81 (74), Prematurity 90 (84), Injury at birth 38 (42), Other diseases peculiar to early infancy 82 (85), Cerebro-spinal Meningitis 1 (6), Meningitis 4 (3), Whooping Cough 2 (1), Pneumonia 54 (45), Hernia and Intestinal obstruction 5 (7), External causes 18 (6) and all other causes 32 (23).

The causes for which there were large increases in the age group 1 month and under 1 year were:- Diarrhoea 23 (12), Congenital Malformations 35 (24), Other diseases peculiar to early infancy 9 (4), Pneumonia 46 (33), External causes 17 (6), and all other causes 40 (32).

Still Births. These are not included in either births or deaths and they number 271 (254).

Marriages. The number of marriages celebrated was 6,226 (6,190) and the rate per 1,000 of population was 7.59 (7.77). The record number of marriages was 8,129 with a rate of 13.34 in 1942 and the lowest in recent years was 5,321 with a rate of 8.48 in 1945. Marriages in the Registration Office totalled 719 (653).

SUMMARY RETURN. The following return shows the number of births deaths and marriages, the rate per 1,000 of mean population, the number of infantile deaths and the rate per 1,000 births.

PERIOD	BIRTHS REGISTERED		MARRIAGES		DEATHS REGISTERED			
	No.	Rate(a)	No.	Rate(a)	Total		Infants	
					No.	Rate(a)	No.	Rate(b)
Mean								
1920-24	11,857	23.43	4,326	8.55	4,901	9.68	693	58.45
1925-29	11,301	20.16	4,225	7.54	5,034	8.98	526	46.54
